

## Hypergraph Generation

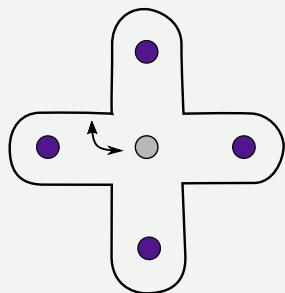

## Message Passing

$$U_t(v_i^t, m^{t+1}) = v_i^{t+1}$$

$\vdots$   $T \times$  Layers

$$R(\{v_i^T\}) = \hat{y}$$

### Relatives Dual Graph

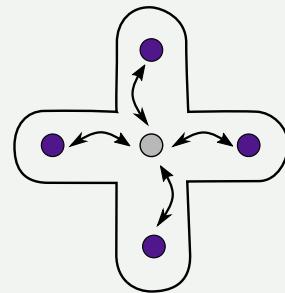

$$m^{t+1} =$$

$$\mathbf{M}_{t+1}(v \oplus h)$$

# of Messages:

$$\mathcal{O}(n)$$

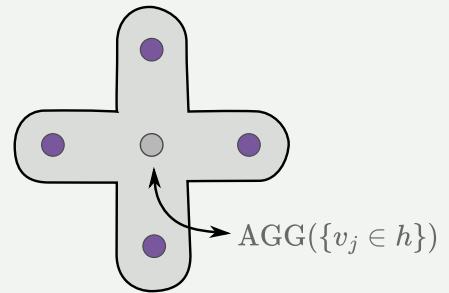

### Total Exchange

$$\sum_{v_j \in h} \mathbf{M}_{t+1}(v \oplus h \oplus v_j)$$

$$\mathcal{O}(n^2)$$

### Neighborhood Aggregation

$$\mathbf{M}_{t+1}(v \oplus h \oplus \text{AGG}(\{v_j \in h\}))$$

$$\mathcal{O}(n)$$

$m$  : Message

$\mathbf{M}$  : Message function for layer

$U$  : Node update function

$R$  : Readout function

$v$  : Node feature

$h$  : Hyperedge feature

$n$  : Number of nodes in hyperedge

$\hat{y}$  : Model output
